

CHESHIRE  
HELICOPTERS

## TWIN SQUIRREL

*Versatility, Efficiency, High Performance - the very essence of the Twin Squirrel Helicopters.*

The preferred choice of helicopter, given its day/night capabilities and flexible door-to-door service, Cheshire Helicopters operate two Twin Squirrel aircrafts. The twin engine IFR machines can be flown in most weather conditions, to carry out instrument approaches down to the same minimums as commercial jet liners to permit flight in just about all types of weather conditions. Its double engine also offers greater efficiency, flying over densely populated areas to provide a direct route to your favoured destination.

The Twin Squirrel aircrafts feature a large cabin space to hold up to 5 passengers. Its versatility comes with the highest commercial benefits, combining optimum performance with efficiency and the newly refurbished interiors make for a comfortable and convenient way to travel.

### Model

- Twin Squirrel, twin-engine IFR Helicopters

### Engine

- Twin-Engine aircraft
- IFR Machines enabling all weather with day and night capabilities. IFR capability also allows considerably higher utilisation of the helicopter, and therefore more efficient
